DELTA PACE HUMAN DEVELOPMENT PROJECT

PACE, MISSISSIPPI 38764

October 28 - November 7, 1977

The Health Consultant Team of the Institute of Cultural Affairs spent an encouraging ten days among the people of Pace, Mississippi. The team included Kenneth Gilbert, M.D., and Ruth Gilbert, Health Educator from Chicago as well as Mrs. Sue Tankersly from Houston and Miss DeBorah Owens, a Health Outpost Coordinator from Ivy City in Washington, D.C. Mr. Mike Rusher and Mr. Aeto Lalimo, both from the project staff, joined the Health Team for its work in Pace.

The major intent of the week was the creation of a neighborhood network of health advocates - volunteers who have decided to be guardians of the community's health. This system rests upon regular visitation in every household in Pace by the Health Advocates who have been trained both to recognize need and to know what health related services are provided by the private and public agencies and institutions of the area. This visitation is complimented by the planning of events that educate Pace citizens and assist in improving general health practices. In all cases, the emphasis is placed on preventive care which lies within the resources of Pace itself, backed up when necessary by curative care resources.

During the week, the Health Team secured Health Advocates for each of the five stakes (neighborhoods) within Pace. Nightly two hour training sessions were held Monday through Friday in the elementary school. Appropriate preventive measures were established for three of the five leading causes of death in Bolivar County (stroke prevention, accident prevention and infant protection). In addition, two training events were held with the Delta Pace Preschool teachers and one was held with the volunteer fire department on treatment of injuries.

The mid-week agency luncheon was a gathering of twenty people concerned about the health care available in Bolivar County and its delivery to the people of Pace. Conversation during the luncheon revealed a number of additional ways that the Health Advocates of Pace might work with agencies in preventive care measures.

A Health Fair on Saturday afternoon was a highlight of the week's activities. The sun shone brightly for half of the planned fair time. During the fair, a quarter of the six hundred residents of Pace came out to see movies, have their hearing, vision, and blood pressure checked and to enjoy and learn from the displays set up by agencies, community groups and Mississippi Valley State University. Both the young and the old demonstrated interest in learning about their own health care.

The health week in Pace closed with the Health Advocates planning specific steps they could take for the next three months in promoting good health practices in Pace. The commissioning dinner on Sunday was a cele-

bration of the whole week's work and each person's participation. The presentation of certificates and gifts to the Community Health Advocates was witnessed by community leadership and health professionals of Pace as well as guests from outside.

It is clear from time spent in Pace as well as in other communities around the world that the vitality of Pace depends on a broad scope of preventive health structures and institutions. It is also true that in our time, the actual delivery of care to every person in a community is calling for a new role in health care - that of the Health Advocate. Pace is pioneering for itself and others in this arena.
