THE PRIORITIES OF THE TACTICAL SYSTEM

INTRODUCTION

1. The tactical model for the reconstruction of the Local Church is, in the final analysis, an abstract model. As concrete and practical as it is, it is of necessity built on the theoretics arising out of years of practical experience in the renewal of the Church. The galactic auxiliary unit responsible for the reconstruction of four Local Churches in a given galaxy is faced with myriad decisions having to do with the particularities of the local situation. The kind of detail manifest in the abstract tactical model demands that a method be provided which orders the tactics by a rational priority scheme which will give, across the continent, a common model for proceeding with and evaluating the tactical process of reconstruction. The priorities are the final link between the abstract, tactical system and the scene of Local Church reconstruction.

I. THE PURPOSE OF PRIORITIES

2. The priorities rationale is based on certain basic principles which bring objectivity to the process of arranging priorities within the tactics. It is necessary to thoroughly understand the purpose and function on priorities in the reconstructive process and it is also important to understand the theory which guided the development of the priorities of the tactics. The priorities are a great symbol of the concrete possibility for the reconstruction of the Local Church and are a crucial tool in the hands of the auxiliary unit.

3. The foundation of the tactical system is mirrored in the contextual chart which, in elemental fashion, lays out the beginnings of a priority system based on years of practical experience in Local Church renewal. The charting of detailed priorities is based in the wisdom of the contextual chart and forms the keystone for the entire tactical system. Without priorities the tactical system remains an untested theory. The priorities serve as a bridge between the abstract, theoretical tactical system and the concrete action to be taken in the particular Local Church. The priorities are the pathway to building the inclusive time design that will serve as the guideline for the local auxiliary in forging the concrete timeline for specific tactical action. The priorities are based on a fundamental revolutionary concept in which one sees that in taking a certain, strategic tactical step, one does, in fact, accomplish the total objective or the entire tactical system. Only by the ordering of priorities can such strategic steps be determined.

4. Although the tactical system will be completely implemented in one year, all 36 tactics having been initiated, the entire system will be symbolically initiated in the first week. This symbolic, first-week initiation is possible because of the ordering of priorities and the use of a tertiary-level electric grid. The entire task of reconstructing the Local Church must be seen as symbolically accomplished in the first week of the experiment in order for the auxiliary to see that actual completion is indeed possible. The priorities are also based on the missional principle which sees the parish as the focus for the tactical action that takes place in the congregation and cadre. The electric grid holds this principle during the phases of the experiment as it progresses through the congregation and cadre toward the parish. This means, in effect, that doing the congregational and cadre tactics in the first year will actually accomplish many of the parish tactics. Finally, in establishing a priorities timeline in the local galactic situation it is of basic importance to discover what tactics are actually happening in each congregation. In addition to raising the morale of the auxiliary, this analysis will serve as a concrete point from which tactical action can be continued and initiated.

5. The priorities of the tactical system serve as a basic guideline for the auxiliary in building the actual timeline for the experiment in a local galaxy. It is important that the

PRIORITIES
CONTEXT

GUIDING
PRINCIPLES

PRIORITIES
FUNCTION

experiment in the reconstruction of the Local Church be seen as a common, continental experiment and the priorities are the continental link that bring this commonality. Every congregation in the experiment will progress along the same relative timeline using the same priority rationale. Of course, adaptations must be made on the local scene to deal with existing conditions and needs, but the common rationale will hold the continental image of the experiment. The priorities bring objectivity to the tactical task thus enabling a constant evaluation process to take place within the Regulation Centrum. Without a common priority scheme there would be no way of measuring the progress of the experiment in a sufficiently wide-tested basis. The priority scheme enables the auxiliary to initiate the kind of action which will be most appropriate to the final completion of the tactical system.

SYMBOLIC
POWER

6. The priorities scheme is a great symbol of the possibility of completing the tactical reconstruction of the Local Church. All the galaxies throughout the continent will begin the experiment on January 1, 1971, wherein the first week they will begin common planning on the initiation of the tactical system. This will lead to the concrete steps each will take as the whole system is set in motion. As a symbol of hope the priorities design serves as a significant morale factor among those who are assuming leadership for the experiment in the Local Church by showing what strategic steps must be taken in what relative sequence in order to accomplish the goal. The ordering of the tertiary steps to be taken rules out any possibility of failure and promises success for the experiment in the reconstruction of the Local Church.

7. The priorities system is a crucial element in the tactical reconstruction of the Local Church which must be taken utterly seriously as the glue which holds the power of a continental experiment. While it is not to be taken as an iron model from which there can be no deviation, nevertheless it is understood that the priorities arise out of years of countless man-hours of tactical experience in Local Church renewal. The priority scheme is the bond which holds theory and tactical action in tension as the revolutionary task is undertaken.

II. THE PRIORITIES FORMULA

8. The priorities scheme for the tactical system has been developed by means of a formula which takes into account the power of the total tactical system weighted with the power of the single, local tactic carried on in the local situation. It is important that this formula be understood in order to enable the local auxiliary to create a meaningful timeline for tactical action, making the necessary adaptations from the common scheme. It is the creation and use of the priorities formula which brings objectivity to the priority rationale.

9. Fifty years of development in church renewal, 16 years of concentrated research on the part of the Movemental Church and four years of practical testing in selected Local Church situations have resulted in the collection of certain wisdom concerning what is effective in accomplishing the reconstruction of the Local Church. This wisdom enabled the building of the contextual chart for the tactical system which gives varied valences to each of the 36 tactics. In deciding what value or weight to give each of these factors in the developing priorities formula a certain amount of arbitrary judgment was made. This, of course, is also true in terms of the decisions made in developing the electric grids for each of the 36 tactics and for the entire system. In order to bring as much concrete objectivity as possible to the priorities scheme the lowest practical level of tactical action was used as a focus, namely, the tertiary tactic. The focus of timeline development in the Local Church will be at the tertiary level, though a general ordering might also be given to the secondary tactics. Priorities have been developed for primary, secondary and tertiary tactics within the system as a whole and also the priorities within the congregation, cadre and parish tactical systems separately.

BASIC
PRESUPPOSITIONS

TOTAL SYSTEM

10. A formula has been developed which computes a priority value for each of the 576 tertiary tactics. The formula is made up of two parts: the total system relationships and the local tactic relationships. The total system side of the formula deals with the relationship of the primary and secondary tactic to the entire system while the local tactic side deals with the relationship of the tertiary tactic to the particular tactic and its sub-tactics. Both the total system and local tactic segments are further sub-divided to take into account valence and influence. The total system, because it represents the major thrust is more important in power than the local tactic. Consequently it was given a weight twice that of the local tactic. On the total system side of the formula the valence factor is comprised of the effectiveness of the primary tactic in relationship to the total system plus its sequential value based on an evaluation of past experience in terms of what must come first in tactical church renewal. $\text{Effectiveness} + \text{Sequence} = \text{the Valence of the primary tactic}$. Influence value is determined by the total system secondary electric grid. The value equals the number of tertiaries which the given secondary of that primary actuates. $\text{Valence} + \text{Influence} = \text{the Total System Value}$.

LOCAL TACTIC

11. Each of the 576 tertiaries was evaluated on the basis of its effectiveness in accomplishing the primary tactic, the ease with which it can be applied in the average local situation, and the time and energy required to accomplish it. Effectiveness is given a weight twice that of the other two factors. Thus, $2 \text{ Effectiveness} + \text{Ease} + \text{Time} = \text{Valence of the tertiary}$. The influence value is based on the electric grid for that primary tactic and is computed by the number of sub-tactics that the given tertiary actuates within its primary. Thus, on the local tactic side of the formula, $\text{Valence} + \text{Influence} = \text{the Local Tactic Value}$.

FORMULA COMPUTATION

12. In order to give the total system and local tactic the proper weight the simple formula for arriving at the tertiary tactic value is $\text{Master Priorities} = 2 \text{ Total System} + 1 \text{ Local Tactic}$. The master priority formula then takes this form: $2 \text{ Total System (Valence} + \text{Influence)} + 1 \text{ Local System (Valence} + \text{Influence)}$. Keep in mind that in the Local Tactic, Valence is 2 Effectiveness plus Applicability plus Time. However still another relational value has to be taken into account. In the Total System the Valence has twice as much weight as the influence of the electric grid whereas in the Local Tactic this is reversed and the Influence value is twice that of the valence. Thus the formula becomes $\text{Master Priority} = 2 \text{ Total System (2 Total System Valence} + \text{Total System Influence)} + (1 \text{ Local Tactic Valence} + 2 \text{ Local Tactic Influence)}$. It is this formula that is used to arrive at the master priorities for the tertiaries and the sum of the four tertiaries gives the priorities for a secondary, the sum of four secondaries gives you the priority for a primary tactic. However still another consideration has to be taken into account. In order to equalize the mathematical scales used in securing the data for the formula the data were multiplied or divided by the necessary factors. This meant dividing the influence value in the total system by four and the valence by two in the local system. The formula then becomes $\text{Master Priorities} = 2 \text{ Total System (2 Total System Valence} + \text{Total System Influence} \div \text{by } 4) + 1 \text{ Local Tactic Valence} \div \text{by } 2 + 2 \text{ Local Tactic Influence}$. In order that only one series of calculations were necessary the following formula was used: $\text{Master Priorities} = (4 \times \text{Total System Valence}) + (\text{Total System Influence} \div 2) + (\text{Local Tactic Valence} \div 2) + (2 \times \text{Local Tactic Influence})$. The data in the tables and charts of this document may be checked with the use of this formula. The computation of the priorities formula affirms the importance and power of the tertiary tactic within the tactical system.

13. The priorities ordering, based on the formula applied to the tertiaries, is done for the sake of enabling the Local Church experiment to be one rather than a series of independent projects. There is, obviously, a degree of the arbitrary in arriving at the formula, but the resultant priorities provide an objective guideline for the complex planning and action of the auxiliary unit. It is on the local, galactic level that the actual priorities will be placed on concrete timelines to create the future of the Local Church.

III. THE PRACTICS OF PRIORITIES

14. The master priorities scheme for the continental experiment is an abstract rationale which must be put to practical use in the local situation. The priorities system is finally to be used as a resource for developing a timeline for actuating the tertiary tactics during the first year of Local Church reconstruction. Certain basic principles will enable the effective creation of timelines as the auxiliary understands the practices of the use of the priorities system.

15. In order that the auxiliary can actuate the entire tactical system in the first week his planning must proceed on the principle that one begins with the broadest context and narrows the tactical planning in stages to the particular task to be done. Thus, in developing a timeline of tertiary priorities it is well to start from the broad context of the year's plan, then proceed to the quarterly plan, the monthly plan and finally, on the basis of the contextual data, develop the weekly tertiary timeline. In order to do this the auxiliary must be well-grounded in the details of the master priorities' scheme for the continent before he proceeds to the development of the local priorities timeline. As he examines the tertiaries for timeline planning, the auxiliary must also have the entire tactical system as a context for the selection of primary tactics to be accomplished, and he holds the primary tactic in view as he selects particular tertiaries. This continual broad contextualizing is vital to the maintenance of a common experiment in Local Church reconstruction.

16. The initial step in creating the weekly priorities timeline is to select the tertiary tactics to be completed that week. The Inclusive Timeline for the continental experiment has already listed the common model for each week of the year. The task of the local auxiliary is to determine, on the basis of the local situation, whether the model is to be followed exactly or whether some adaptation is to be made. In making this decision the auxiliary will proceed to examine first the primary tactic to which the tertiary is related, then the secondary, tertiary, sub-tactic and supplementary level tactics. The material available in the 36 tactic books provides the background necessary for a briefing on the tactic being examined for the timelining process. The contextual principle of proceeding from the primary tactic to lower tactical levels is important in the study and planning for tertiary tactic selection and placement on the weekly timeline.

17. The 36 tactical books provide a wealth of material for study that will inform the decisions regarding tactical timelining. In addition, the individual tactic electric grids and the master electric grid provide valuable background data. The influence factors for each tertiary can be checked on the master and single electric grids to evaluate the effectiveness of the tertiary being studied. In addition to electric grid study the auxiliary should study the prose material concerning the primary tactic in the tactic book, as well as the procedures for the secondaries and the sentences which describe the tertiaries and sub-tactics. The sentences actually include material on the supplementaries as well which is valuable grist for the tertiary tactical decision. Study of all available data concerning the various tactical levels related to the tertiary being selected is crucial to a revolutionary decision.

18. The priorities rationale has been developed only so that an effective, common timeline could be used throughout the experiment, adapted where necessary to local conditions. The creation of the timeline must proceed from the broad to the particular beginning with the yearly design, through quarterly, monthly and weekly plans. The Inclusive Timeline for the experiment blocks the tactics into the four time designs so that each quarter 9 primary tactics are completed, each month 12 secondary tactics are completed and in each week 12 tertiary tactics have been done. The focus of timeline planning is, of course, on the tertiary level, but the abstract Inclusive Timeline gives a priorities design that makes the task appear possible as the auxiliary approaches each week. The auxiliary must design time blocks for each level of tactical action based on the needs of the local situation he is working with.

CONTEXTUAL
PLANNING

TACTIC
SELECTION

TACTICAL
DATA

TIMELINE
CREATION

19. The auxiliary must continually make use of the broadest context possible in making his priorities decisions. Without the common context and priorities scheme the auxiliary would soon become enmeshed in ineffective and unmeasurable tactical steps. Certain practical steps must be taken to familiarize oneself with the tertiary in order that a local priority can be established. The practical steps in doing this must now be spelled out.

IV. THE TIMELINES FOR PRIORITIES

20. The Practics for Priorities have listed the basic principles which guide the preparation for timeline planning. There are certain proven steps which can be taken by the auxiliary as he prepares to make his decision which will enable the most appropriate decision for his situation. These concretions and guidelines are suggested in the paragraphs which follow.

21. The auxiliary who approaches the timelining task must see the Inclusive Timeline for the continental experiment as a guideline for his decision-making and, while trusting its wisdom, using it in conjunction with his own intuitions regarding the situation at hand. While holding the pole of the comprehensive task to be completed, the auxiliary must also strive to create realistic, achievable timelines. Once the decision has been made concerning the weekly timeline then that decision must be rendered up to the Lord and actuated on the local scene. Weeks and months of tactical planning and action will sharpen the intuitions and skills of the auxiliary model builder.

22. There are certain adjustments in the common continental priorities model which must, of necessity, be made from time to time in the Local Church situation. Where a particular situation makes obvious a need for change in tactical sequence this must, of course, be done. Certain unique situations in the congregation, cadre or parish may necessitate a shift in priorities or emphases. In certain situations the availability of the required forces to complete the task may not be sufficient and an alternate tactical plan will have to be developed. While the Master Priorities Chart takes into account the time and energy required to do the tactical job, the local situation may indicate that the time required will be much more or much less and a proper adjustment can be made in the weekly time design. The auxiliary must constantly evaluate the number of adjustments made to check their necessity over against the need for holding the commonality of the experiment for testing purposes.

23. The study in preparation for the selection of a given tertiary for the weekly timeline must proceed along certain basic steps. First the tertiary tactic to be studied for possible placement on the timeline must be selected. The auxiliary should then read through the prose description for the primary tactic of that tertiary as well as the prose material for the particular tertiary and its sub-tactics. There are 16 supplementaries for each sub-tactic which must be studied in light of the sentences in the tactic book. It is important that the study include an analysis of what is presently going on in the church on the supplementary level in order that local priorities can be selected. This tactic study will prepare the auxiliary for building a concrete battle plan for his week's work.

TIMELINE
GUIDELINES

NECESSARY
ADJUSTMENTS

TACTIC
STUDY

TACTICAL TIMELINE

24. The auxiliary is now prepared to proceed into the final, concrete details of timeline planning. First he must select one or more of the 16 supplementaries to activate which will effect the sub-tactic and tertiary tactic. The next step is to study the procedures in the tactic book for the whole tactic and those related to the particular secondary and tertiary. The procedures provide an image that will enable the auxiliary to establish his own procedural steps in activating the supplementaries. The auxiliary is now ready to create the plan for activating the supplementaries needed to actuate the tertiary. He must select the necessary procedures and the mini or local tactics which are the concretions on the local scene of the abstract supplementary suggested. Next the focus required and available to carry out the selected steps must be evaluated and finally the necessary instruments must be gathered based on an analysis of the instrument charts in the back of the tactic book. The auxiliary must take these specific steps in deciding on each tertiary to be placed on his weekly priorities timeline in the local church.

25. The procedure for preparing the timeline is a methodical process which can become wooden unless the auxiliary constantly holds the comprehensive vision of reconstruction and continually measures the results of his tactical action. The auxiliary will profit from an almost mechanical use of the procedural steps for several months in his timeline planning in order that the procedure may become second nature to him.

CONCLUSION

26. The preparation of the priorities scheme is perhaps the most mechanical of the abstract planning for the project in reconstruction, but, in the final analysis, is an exciting breakthrough in providing the possibility for a common, continental experiment. The priorities are witness to the wisdom that the revolutionary churchman very concretely selects the place and time of his expenditure of life. The vast and complex tactical system is useless without the priorities scheme which brings the most minute supplementary step into focus on a weekly time design. The lives of countless churchmen living and dead are contained in the storehouse of wisdom which brought the priorities system into being. The auxiliary stands as the link between past and future as he embodies the decision of the Movemental Church to reconstruct the Local Church on behalf of the Historical Church and for the sake of a new hope for humanness for all men.

FORMULA DEMONSTRATION SHEET

In order to effectively use the provided charts relative to the formula, the example that follows has been worked through using Primary Tactic I, Secondary I, Tertiary Tactic I.

1. The formula as stated in paragraph 12 of this document.

$$\text{Master Priority} = 4 \text{ Tot. Sys. Val.} + \frac{\text{Tot. Sys. Infl.}}{2} + \frac{\text{Loc. Tac. Val.}}{2} + 2 \text{ Loc. Tac. Val.}$$

2. Document Sections to locate data.

$$\text{Doc. Sec 2} = \text{Document Section 3} + \text{Document Section 4}$$

3. (You will remember the Total System Valence in Sec. 3 is a total of Sequence Valences. plus Effectiveness Valence.

$$\begin{array}{lcl} \text{eg. Primary Tactic I: Valence} & = & \text{Sequence} + \text{Effectiveness} \\ \text{or: } 32 & = & 16 + 16 \end{array}$$

4. Data for the formula:

$$256 = 32 + 53 + 98 + 26$$

5. Formula with data inserted:

$$256 = (32 \times 4) + (53 \div 2) + (98 \div 2) + (26 \times 2)$$

6. Formula with totals:

$$256 = 128 + 27 + 49 + 52$$

Key to abbreviations:

Tot. — Total
 Sys. — System
 Val. — Valence
 Infl. — Influence
 Loc. — Local
 Tac. — Tactic

THE MASTER ELECTRIC GRID

The Master Electric Grid was created in order that the secondary tactics could be related to the tertiary level tactics. It is designed to show how many and which specific tertiaries of the 576 are turned on by doing fully any one of the 144 secondaries.

The Master Electric Grid was created by arranging the 144 secondaries in a vertical column, and the 576 tertiaries on a horizontal line for *each* of the secondaries. The Grid then was built by first taking each secondary tactic and understanding it in the context of its own primary. Then, each primary tactic of the total tactical system was taken in turn and checked at the supplementary level to see if the fully actualized secondary simultaneously accomplished any of the supplementaries. The assumption was that if a secondary turned on *any* three of the supplementaries under any one tertiary—that tertiary was activated. For example, Primary Tactic no. 18, Secondary Tactic no. 69: Cultivating The Educational Climate Activates seven tertiaries (321, 324, 325, 326, 330, 332, 333, and 334) of Primary Tactic no. 21 and three tertiaries (344, 348, and 351) of Primary Tactic no. 22.

Secondary	324	328	332	336	340	344	348	352
Tactic	323	327	331	335	339	343	347	351
Number	322	326	330	334	338	342	346	350
69	321	325	329	333	337	341	345	349

The relationship that is thus indicated between the actualized secondary and the tertiaries it actualizes are indicative of that secondary's influence on those tertiaries and not of any influence those tertiaries and their secondaries might have on the actualized secondary.

The Master Electric Grid is divided into three grids—cadre, congregation, and parish. Each grid thus relates forty-eight of the 144 secondaries to the *total* system of tertiaries. The number of tertiaries activated by each secondary are in the left hand column entitled "SECONDARY TACTICS" and are listed to the right of each secondary tactic number.

The Master Electric Grid rationally holds the interrelationships of the secondaries to the total system. In this way then each individual secondary is seen in the context of the total tactical system and its influence is measured by the number of tertiaries it activates.

PRIORITIES CHARTS EXPLANATION

GRAND MASTER PRIORITY CHART

The grand master priority chart numbers 6 pages, each page listing the master valence for 6 tactics. Each page is vertically divided into 2 parts with 3 tactics listed on each side of the page. The extreme left column is the valence total of that particular primary tactic. The valence total of the primary tactic is the sum of the total for each of the 4 secondary tactics which appear in the next column to the right. The totals of the secondary tactic, which is the second column from the left is the sum of the total for each of the 4 tertiary tactics which appear again the next column to the right. The tertiary valence column, which is the third column from the left, is the result of the total computed from the priorities formula. The above process is repeated 6 times on each page or 3 times in each of the 2 vertical columns of each page.

MASTER PRIMARY PRIORITIES (PRIORITIES CHART I)

The master primary priorities chart indicates the priority rank for the 36 tactics according to the total computed by the priorities formula. The priority rank appears in the vertical column on the extreme right side of the page. The priority rank ranges from the highest, which is 7925, to the lowest, which is 2311. The central body of the chart is composed of 3 columns which are for the cadre, congregation, and parish tactical systems. Each individual tactic is located vertically on the chart according to its priority rank and in the column which is proper to its system of tactics. Finally, the column on the extreme left sequentially groups the tactics into groups of 6 to 8 tactics and gives the average rank for each group.

MASTER SECONDARY PRIORITIES

The master secondary priorities chart includes 3 pages which are each divided into 3 columns for the tactical systems of cadre, congregation and parish. The 144 secondaries are listed vertically according to the priority valence and in the proper column or tactical system to which that tactic belongs. The numbers in the extreme left column indicate the priority position beginning with number 1 and proceeding through number 144. The second column from the left indicate the primary tactic number of the secondary, e.g. number 5, and the secondary number, e.g. number 19. The third column from the left is the priority valence computed from the priorities formula. Proceeding across the page to the right, the same function of the 3 columns under the congregation and the cadre continues.

MASTER TERTIARY PRIORITIES

The master tertiary priorities sheets prioritize the 576 tertiaries. It is divided into 3 columns of cadre, congregation and parish and holds the total tertiary tactic system. The numbers under the column on the left, "NUMBER", indicate the number of ranking in the tertiary system of any single tertiary. The numbers listed under the columns entitled cadre, congregation and parish are the primary, secondary, and tertiary tactic numbers for each of the 3 sets of 12 primary tactics. The numbers under the 3 columns entitled "VALENCE" are arrived at through using the formula and are the basis upon which the ordering and prioritizing was done.

INCLUSIVE TIMELINE FOR RECONSTRUCTION OF THE LOCAL CHURCH

The inclusive timeline for reconstruction of the Local Church places the 36 primaries, 144 secondaries and 576 tertiaries of the tactical system on a one year timeline. The second column of this sheet lists the 36 primaries in a prioritized listing. Nine primaries are listed per quarter. The third column lists the 144 secondaries with 12 secondaries listed per month. And the last major column on the right lists the 576 prioritized secondaries by weeks, with 12 tertiaries listed per week. There is no horizontal interrelationship between the 3 columns.

MASTER PRIORITIES CHART: PLATE FIVE

The master priorities chart indicates the valence rating for the 36 primary tactics according to effectiveness. The valence rating appears in the first vertical column on the right side of the page. The valences range from the highest, which is 48, to the lowest, which is 4. The bulk of the chart entitled "Tactical Systems" is made up of three columns which are for the cadre, congregation and parish tactical systems. Each individual tactic is located vertically on the chart according to its priority valence and in the column which is proper to its system of tactics. Finally, the column on the extreme left groups the tactics into groups of 6 to 8 tactics and gives the average valence for each group.

SEQUENTIAL VALENCE CHART

The primary tactical sequential valences chart shows the valence rating for the 36 tactics according to sequence. The valence rating appears in the vertical column on the extreme right side of the page. The valence ranges from the highest, which is 48, to the lowest, which is 4. The central body of the chart is composed of 3 columns which are for the cadre, congregation and parish tactical systems. Each individual tactic is located vertically on the chart according to its priority valence and in the column which is proper to its system of tactics. Finally, the column on the extreme left groups the tactics into groups of 6 to 8 tactics and gives the average valence for each group.

PRIMARY VALENCE CHART

The master primary valence sheet first and foremost shows the valence rating for the 36 tactics according to effectiveness and sequence. The valence rating appears in the vertical column on the extreme right side of the page. The valence rating appears in the vertical column on the extreme right side of the page. The valence ranges from the highest, which is 93, to the lowest, which is 8. The central body of the chart is composed of 3 columns which are for the cadre, congregation and parish tactical systems. Each individual tactic is located vertically on the chart according to its priority valence and in the column which is proper to its system of tactics. Finally, the column of the extreme left sequentially groups the tactics into groups of 6 to 8 tactics and gives the average valence for each group.

GRAND MASTER VALENCE CHART

The grand master valence chart numbers 6 pages, each page listing the master valence for 6 tactics. Each page is vertically divided into 2 parts with 3 tactics listed on each side of the page. The extreme left column is the valence total of that particular primary tactic. The valence total of the primary tactic is the sum of the total for each of the 4 secondary tactics which appear in the next column to the right. The totals of the secondary tactic, which is the second column from the left is the sum of the total for each of the 4 tertiary tactics which appear again in the next column to the right. The tertiary valence column, which is the third column from the left, is the result of the sum of the valence computed from the rating of the importance, ease and time/energy of the 4 sub-tactics under each tertiary. The above process is repeated 6 times on each page or 3 times in each of the 2 vertical columns of each page.

THE NUMERICAL SYSTEM FOR TACTICS 1-36

This chart is a numerical chart which lists all of the tactics in the tactical system by number. The first vertical column lists the 36 primary tactics. To the right then of each primary tactic are listed the numbers of its 4 secondaries and its 16 tertiaries. The final column then indicates that there are 64 subtactics per primary tactic and that these are numbered from 1 to 64 for each of the primary tactics.

LOCAL ELECTRIC GRID

The electric grid for each of the thirty-six primary tactics shows the interrelationship between tertiaries and sub-tactics within each primary tactic. The question asked was, "when any one of the tertiaries is turned on fully, i.e. all four sub-tactics activated, which of the other sixty sub-tactics is also simultaneously activated?" The activation of any sub-tactic is considered as the activation of its tertiary.

The grid is laid out with the sixteen tertiaries down the right hand side. Across the top is also the tertiaries but here its four sub-tactics are indicated beneath it. Each tertiary square is divided into four and the sub-tactics are numbered clock-wise within the square. For any tertiary you should locate it in the right hand column and read across the grid to discover its relationships to the sixty-four sub-tactics.

The chart at the bottom is an abstract of the data in the electric grid. Intensity no. 1 is the level of intensity, which indicates what one tertiary or combination of tertiaries is necessary to activate one or more sub-tactics in all sixteen tertiaries, thus activating the entire tactic. Intensity no. 2 indicates which tertiaries would activate two or more sub-tactics in all sixteen tertiaries. The same is indicated by intensity no. 3 and intensity full would be the tertiaries which activate all sixty-four sub-tactics. The charts that do not have data beyond intensity no. 1 indicate that the number of tertiaries needed to achieve intensity level no. 2 are so many as to make the data meaningless.

The grid for each tactic thus allows an evaluation of the tertiary's importance within its tactic. This data is part of the master formula for deciding the master system of priorities.

INSTRUCTIONS FOR THE USE OF WEEKLY TERTIARY ACTUALIZATION SHEET.

I. OBJECTIVE

The battleplan sheet begins with a statement of the strategic intent behind the tactics in a particular area. The following steps are:

1. having selected a particular week from the inclusive timeline for reconstruction select the tertiary tactic for that week on which to work.
2. read through prose description for the primary tactic of that tertiary.

II. OPERATION

3. study the prose description of the particular tertiary, including its sub-tactics.
4. study the supplementaries (there are four for each sub-tactic). See if any of these are already going on in the church.
5. select one or more of the sixteen supplementaries to activate which will turn on the sub-tactic and tertiary.
6. study the procedures for the whole tactic, then for the particular tertiary (this will help provide an image for establishing the steps for activating the supplementaries).
7. write down what has to be done to do the necessary supplementaries and procedures.

III. FORCES

8. decide on the forces required and available to carry out the selected steps.

IV. INSTRUMENTS

9. decide on instruments required using the instruments charts in the back of the tactic book.

V. TIMELINE

10. the twelve tertiary sheets for the week have to be put on a timeline.
